4DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-4 have been considered but are most in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by Seong-jin et al (6,356,691).
- 3. Seong-jin discloses a surface illuminant comprising a light source(40), a light guide plate (36) having opposed sides which is optically coupled to the light source for emitting incident light from the light source (abstract) through one opposed side thereof and a reflection film ((24) which is disposed on the other opposed side of the light guide plate, wherein a wave length converting material is applied on the reflective film (20).
 - A surface illuminant comprising a light source, a light guide plate having
 opposed sides(36) which is optically coupled to said light source for emitting light
 incident from said light source though one opposed side thereof(abstract, fig 2)
 and a reflective film which is disposed on the other opposed side of the light
 guide plate wherein the reflective film (24) comprises a light storage
 material(20).

Application/Control Number: 09/937,664

Art Unit: 2875

- A surface illuminant comprising a light guide plate having opposed sides(36) which is optically coupled to said light source for emitting light incident from said light source through one opposed side thereof (abstract, fig 2)and a reflective film which is disposed on the other opposed side of said light guide plate (24) wherein said light guide plate is made of a transparent material in which a light storage material is blended (phosphor 20).
- A surface illuminant comprising a light source a light guide plate having a opposed sides which is optically coupled to the light source for emitting light incident from the light source through one opposed side thereof and a reflective film which is disposed on the other opposed side of the light guide plate wherein a light storage film is formed on the surface of the light guide plate(surface, end portion of 20 figure 2 on light guide 36).

Allowable Subject Matter

4. Claim 5 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Prior art cited does not disclose the concentraion of the light storage material in the light storage layer being increased from its one end adjacent to the light source to the other end.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Anabel M Ton whose telephone number is (571) 272-2382. The examiner can normally be reached on 08:00-16:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Sandra O'Shea can be reached on (571) 272-2378. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.
